What will be the Pay back period of the project?

15

**4.** From the following information, determine the theoretical market price of each equity share of a company as per Walter's Model:

Earnings of the Company	₹ 10,00,000
Dividend paid	₹ 5,00,000
No. of equity shares outstanding	₹ 2,00,000
Cost of Equity capital	12%
Rate of return on investment	15%

15

### Group - B

Answer any two questions.

25×2

**5.** Calculate weighted average cost of capital (WACC) considering market values for AD Ltd. from the following details:

## Sources of Capital

Equity share capital (₹ 10 each)	₹	12,00,000
Retained Earnings	₹	28,00,000
14% Preference shares (issued at a premium of 8%)	₹	90,000
15% Debentures	₹	3,60,000

Please Turn Over

Other information:

- Applicable corporate tax rate 30%
- Market price per share ₹ 50, Dividend per share is expected to be ₹ 6. AD Ltd. maintains a growth of 5% in this regards.
- Debentures of face value ₹ 1000 each were issued at 3% discount (with an additional underwriters' commission of 1.5% on face value). Tenure of Debenture 10 years.
- 6. PP Construction Ltd. is considering the five possible projects to invest in, as shown below:

Project	Cash Outflow (₹)	PV of Cash Inflows (₹)	
A	5,00,000	7,50,000	
В	2,00,000	2,10,000	
С	5,00,000	8,00,000	
D	1,00,000	80,000	
Е	3,00,000	3,30,000	

Available fund is ₹ 12,00,000. Apply Capital rationing decision concept and select the projects. All the projects are divisible in nature.

7. Relevant information about two companies are given below:

	X	Y
Annual production capacity (Units)	1,00,000	1,50,000
Capacity utilisation and sales	75%	75%
Unit selling price (₹)	40	50
Unit variable cost (₹)	15	15
Fixed cost for the year (₹)	2,00,000	3,00,000
Equity capital (₹ 10 per share)	5,00,000	7,00,000
10% Preference share capital (₹)		50,000
15% Debentures (₹)	1,00,000	2,00,000

Determine the degree of Operating Leverage, degree of Financial Leverage, degree of Financial Leverage and Earning per Share of two companies. (Tax rate 40%).

**8.** The capacity of your company is to produce 40,000 units of valve per annum. The company expects to operate at 60% of the capacity level. You are required to ascertain the working capital requirement at the current level of operation.

The following information on the cost-price structure of valves at the current level of production is available:

Elements of costs	Per unit (₹)
Raw-material	6
Direct labour	3
Overhead	4
Total cost	13
Profit	3
Selling price	16

Raw-materials are in stock, on an average, for 2 months. The duration of the production process is half a month. Finished goods are in stock, on an average for 1 month. Credit allowed to customers is 3 months and that obtained from suppliers is 1.5 months, lag in payment of wages is half a month. There is usually no lag in payment of overhead.

**9.** X Ltd. wants to purchase one machine out of two mutually exclusive machines under consideration. Other information related to these machines are as below:

Particulars	Machine 1	Machine 2	
Purchase price (₹)	3,00,000	2,80,000	
Estimated life (years)	5	5	
Net cash flows (₹)			
Year 1	80,000	60,000	
Year 2	1,20,000	80,000	
Year 3	90,000	1,20,000	
Year 4	85,000	1,50,000	
Year 5	1,58,000	92,000	

Compute the NPV of each machine assuming a cost of capital of 10%. Which machine should the company buy?

The present value of ₹ 1 to be received at the end of each year at 10% is given below:

Year	1	2	3	4	5
P.V. (₹)	0.909	0.826	0.751	0.683	0.621

25

- 10. (a) Mention any five important factors that a firm should consider in formulating dividend policy.
  - (b) Discuss financial leverage with reference to the formulae.
